7th INTERNATIONAL S.I.A. MEETING

Some of the most common knee pathologies and treatments (meniscal transplantation, reconstruction of knee ligaments, knee preserving surgery and arthroplasty), shoulder (challenges for irreparable cuff tears, instability and arthritis) and hip (arthroscopic management of hip pathologies) as well as cartilage injury and biotechnological innovations will be brought into focus.

We aim to carry out an event able to symbolize a solid and lasting bridge between all the orthopaedic surgeons operating in this area, establishing a soundly based collaborative relationship, cultural and scientific exchange to enlarge the professional growth and to deepen the understanding between all communities and countries: one of the most pressing and actual issues nowadays.
